BREAKTHROUGH IN WELLNESS

The original and patent protected concept of USSPA, who was the first in the world to introduce such ideal combination of swim and massage spa in 2007.

Combi Spa^{IN} has a shape of a letter L, which enables it to be attached to swim spa. It can be variably placed to any corner on the step side of swim spa according to the possibilities and specifics of the installation area. Thanks to the connecting steps, you can comfortably move from swim spa to spa and vice versa. Swim spa and Combi Spa^{IN} can be placed simply in a wooden cabinet on a reinforced surface or installed in the ground. Semi in-ground installation is another practical option.

Despite the fact that swim spa and Combi Spa^{IN} are a perfect combination, they remain independent. Thanks to the separated technology you can set lower water temperature for swimming in swim spa and keep a hot bath in the Combi Spa^{IN} at an ideal level for hydromassage. Both can be used without any limits throughout the whole year, whether inside or outside.

A perfect set with elegant design and many built-in practical features complies with the requirements of modern architecture and contemporary lifestyle.

MASSAGING POSITIONS IN COMBI SPA^{iN}

.....

Combi Spa^{iN}, despite its unique external shape and specific options of connection to swim spa, is primarily a spa providing perfect hydrotherapy identically to the best models of USSPA | privat. Thanks to water and air jets installed in specific hydrotherapy sets, Combi Spa^{iN} provides a real complex massage. In each position, you can continually regulate the massage intensity by Boost Control^{iN} to achieve a pleasant massage.

Each lounger and seat is equipped with a different therapeutic jet set focusing on specific body parts. While in the spa you just move from place to place in order to experience a relaxing complex massage...

ShiatsuComplex^{iN}

The point massage Shiatsu comprises of direct jets for pressure effects on shiatsu points in the area of meridian yang (meridians are the channels where life energy flows, according to the traditional eastern medicine). The method is based on symmetrical point pressure effects, which disperse energy from the location where it is accumulated and adds it to the area with its insufficiency; the goal of the massage is to balance the right and left side, restore the overall balance, harmony and health.

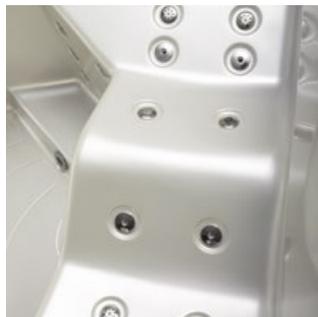

FanComplex^{iN}

The fan massage of important muscle parts on the back utilizes one of the classic massage techniques – fan friction. It is a relaxing massage with circular movements performed by a set of rotating jets in our spa.

LegComplex^{iN}

The combination of pairs of point water jets and air jets provides massage from buttocks to the thighs and calves up to the soles of the feet. The simulation of the reflection points on the soles has relaxing effects on the whole body.

There are two different loungers with various jet sets, which complement each other.

XComplex^{iN}

The point massage of jets located in a cross shape affects the lower back area which is the most loaded part of the back. It loosens the muscle parts in the area of lower limbs and torso connection, important for correct body posture.
